

Mitochondria: Structure, Biogenesis and Transducing Functions

H. Tedeschi

Springer -Verlag
Wien New York

Contents

A. Structure of Mitochondria	1
1. General Organization	1
a) Conventional Thin Section Electron Microscopy	1
b) Negative Staining Techniques	3
c) Freeze-Cleavage	4
2. Special Organization and Inclusions	10
a) Prismatic or Atypical Cristae	10
b) Filaments and Tubules	11
c) Amorphous Inclusions	12
d) Intramitochondrial Granules	12
e) DNA Containing Fibers	14
3. Topography of the Mitochondrial Transducing Systems	15
B. The Assembly of Mitochondria	18
1. Mitochondrial DNA and Its Genetic Role	19
2. Transcription of the Mitochondrial DNA	28
a) mRNA	30
b) The Machinery for Transcription and Translation	32
c) Turnover of Mitochondrial RNA	36
3. Protein Synthesis	37
a) Mitochondrial Protein Synthesis and Its Characteristics	37
b) Role of Mitochondrial Protein Synthesis	40
c) Synthesis of Specific Proteins by Mitochondria	43
4. Synthesis of Phospholipids	50
5. Mitochondrial Assembly	51
6. Interactions in the Assembly of Mitochondrial Components	54
7. Regulation of Nuclear Genome by Mitochondria	56
C. Transducing Functions of Mitochondria	57
1. The Respiratory Assemblies and Oxidative Phosphorylation	57
a) General Organization	57
b) Energetics of the System; Redox Potentials	59
2. Dissection of the Respiratory Assemblies and the Components Responsible for Coupling	65

3. Mechanisms of Oxidative Phosphorylation	70
a) Coupling by Ion Fluxes in the Direction of the Electro-Chemical Potential Gradient	71
b) Other Models of Coupling Involving High Energy States	85
c) Chemical Intermediate and Conformational Models in Phosphorylation	87
4. Permeability and Transport	89
a) The Transport of Cations and General Models of Transport	89
b) Anion and Amino Acid Transport	100
c) Adenine Nucleotide Transport	105
d) Carriers and Ionophores	106
Bibliography	110
Subject Index	161
