The Biology of Peatlands

Håkan Rydin
Department of Plant Ecology,
Uppsala University

and

John K. Jeglum
Department of Forest Ecology,
Swedish University of Agricultural Sciences

with contributions from
Aljosja Hooijer, Beverley R. Clarkson, Bruce D. Clarkson,
Dmitri Mauquoy, and Keith D. Bennett
Contents

LIST OF CONTRIBUTORS x

1 Peatland habitats 1
   Wetlands, peatlands, and mires 2
   Peatland habitats along wetness and chemical gradients 4
   Origin of groundwater and trophic classes 5
   The main ecosystems: marsh, swamp, fen, bog 6
   Environmental ordination 13
   Frameworks for finer classification of peatlands 13

2 Diversity of life in peatlands 20
   Fungi and microorganisms 20
   Protozoans 24
   Algae 25
   Lichens 26
   Plants 27
   Animals 36

3 Adaptations to the peatland habitat 45
   Plant adaptations to flooding and anoxic conditions 45
   Plant adaptations to low nutrient availability 50
   Adaptations in animals 56

4 Sphagnum – the builder of boreal peatlands 58
   Morphology 58
   Sphagnum life cycle 61
   Diversity of Sphagnum 63
   Sphagnum characteristics 63
   Sphagnum as an environmental indicator 68
   Biological interactions in Sphagnum 68
   Dispersal and colonization 73
   Dynamics and persistence in Sphagnum assemblages 74
5 Peat and organic soil
   Sedentation versus sedimentation
   Organic versus mineral matter content
   Botanical composition of peat
   Sampling the peat profile
   Peat properties
   Organic soils (histosols)

6 The peat archives
   Peat fossils
   The problem of dating profiles
   Peatlands as archives of changes in climate and vegetation
   Geographic shifts in vegetation
   Pleistocene peatlands
   Environmental research
   Wetland archaeology

7 Peatland succession and development
   Peatland succession
   Successional pathways
   Processes of peat formation
   Detailed sequences of peatland development
   Cyclic regeneration – a myth?

8 Hydrology of peatlands
   Water quantity
   Acrotelm and catotelm
   Water balance
   Peatlands as regulators of water flow
   Water quality
   Variation in water chemistry along the bog – rich fen gradient

9 Nutrients, light, and temperature
   Nutrients
   Light
   Temperature and other climatic factors

10 Peatland patterns and landforms
   Hydrologic systems
   Landform and hydromorphology
CONTENTS ix

Mire descriptions and classifications at different scales 195
The formation of peatland patterns 213

11 Peatlands around the world 216
Areas of peatland 216
Peatland areas used for agriculture, forestry, and peat harvesting 219
A brief global survey 221
Peatlands in Tierra del Fuego
by Dmitri Mauquoy and Keith D. Bennett 223
Restiad bogs in New Zealand
by Beverley R. Clarkson and Bruce D. Clarkson 228
Tropical peatlands in south-east Asia
by Aljosja Hooijer 233

12 Productivity and carbon balance 239
Biomass and productivity 239
Decomposition 244
Peat formation and carbon flow 248
Peat accumulation and its limits 250
Carbon store in peatlands 257
Effect of drainage and forestry on C balance 259

13 Uses, functions, and management of peatlands 262
Historical development of peatland use 263
Agriculture on peatland 264
Forestry on peatland 266
Peat extraction 269
Functions and values 273
Management of peatlands 274
Peatland societies and organizations 285
