

International Union of Pure and Applied Chemistry
Analytical Chemistry Division

COMPENDIUM OF
ANALYTICAL NOMENCLATURE
DEFINITIVE RULES 1987

Prepared for publication by

HENRY FREISER

Chemistry Department
University of Arizona
Tucson, USA

and

GEORGE H. NANCOLLAS

Chemistry Department
State University of New York
Buffalo, USA

SECOND EDITION

BLACKWELL SCIENTIFIC PUBLICATIONS

OXFORD LONDON EDINBURGH

	PAGE
LIST OF TABLES	vi
LIST OF FIGURES	vii
1. FOREWORD	1
1.1 Scope and Treatment	1
2. PRESENTATION OF THE RESULTS OF CHEMICAL ANALYSIS	4
2.1 Introduction	4
2.2 General Terms	4
2.3 Reliability of Results	6
3. SOLUTION THERMODYNAMICS	7
3.1 Ionic Activity Coefficients	7
3.2 Solution Equilibria	9
3.2.1 Introduction	9
3.2.2 General Rules	9
3.2.3 Complex Formation Equilibria	11
3.2.4 Connected Quantities (Average Ligand Numbers, Etc.)	13
3.2.5 Solubility Equilibria	14
3.3 pH and Related Terms	15
3.3.1 Introduction	15
3.3.2 Symbols	15
3.3.3 Definitions	16
3.3.4 Standard Reference Solutions	17
3.3.5 Conventional Residual Liquid Junction Potential	21
3.3.6 Certified Reference Materials (CRM) for pH	21
3.3.7 Measurement of pH (X)	24
3.3.8 Interpretation of pH in Terms of Hydrogen Ion Concentration	25
3.3.9 Determination of $\text{pH} = -\lg(c_{\text{H}^+}/c^{\circ})$ in Solutions of Constant Ionic Strength	25
3.3.10 Determination of pH in Blood and Body Fluids	26
3.3.11 Glossary	26
3.4 Practical Measurement of pH in Nonaqueous and Mixed Solvents	28
3.4.1 Introduction	28
3.4.2 The Operational pH Scale	29
3.4.3 Interpretation of the Measured pH	30
3.4.4 Extension to Other Solvents	30
3.4.5 Selection of a pH Unit for Amphiprotic Solvents	32
3.4.6 Operational pH Scale for Amphiprotic Solvents	32
3.4.7 Reference Solutions for Values of pH Amphiprotic Solvents	33
4. RECOMMENDATIONS FOR TERMINOLOGY TO BE USED WITH PRECISION BALANCES	35
4.1 Introduction	35
4.2 Terminology	35

5.	RECOMMENDATION FOR NOMENCLATURE OF THERMAL ANALYSIS	38
5.1	General	38
5.2	Individual Thermoanalytical Techniques	39
5.3	Definitions and Conventions	39
6.	RECOMMENDATION FOR NOMENCLATURE OF TITRIMETRIC ANALYSIS	47
• 7.	AUTOMATIC ANALYSIS	
8.	ELECTROCHEMICAL ANALYSIS	50
8.1	Recommended Terms, Symbols and Definitions	50
8.2	Introduction to Classification of Electroanalytical Techniques	65
8.3	Classification of Electroanalytical Techniques	66
9.	ANALYTICAL SEPARATION PROCESSES	83
9.1	Precipitation	83
9.2	Liquid-Liquid Distribution	87
* 9.3	Zone Melting and Fractional Crystallization	
9.4	Chromatography	92
9.5	Ion Exchange	
10.	SPECTROCHEMICAL ANALYSIS	111
10.1	Radiation Sources	111
10.1.1	Introduction	111
10.1.2	Terms, Symbols and Units for Measurable Quantities for Radiation Sources	114
10.1.3	Electrical Arcs	123
10.1.4	Electrical Sparks (Spark Discharges)	129
10.1.5	Radiofrequency Plasmas	135
10.1.6	Microwave Plasmas	140
10.1.7	Lasers	141
10.1.8	Low Pressure Electrical Discharges (LPED)	145
10.2	General Atomic Emission Spectroscopy	154
10.2.1	Terms, Symbols, and Units Related to Radiant Energy	154
10.2.2	Terms and Symbols for the Description of Spectrographic Instruments	156
10.2.3	Terms and Symbols Related to the Analytical Procedures	158
10.2.4	Photographic Intensity Measurements (Photographic Photometry)	160
10.3	Flame Spectroscopy	163
10.3.1	Terms, Symbols and Units for the Description of the Analytical Apparatus	163
10.4	X-ray Emission Spectroscopy	173
10.4.1	Terms Related to X-ray Generation	173
10.4.2	Terms Related to X-Ray Measurements	175
10.4.3	Terms Related to Sample	181
10.4.4	Terms Related to X-ray Data Interpretation and Quantitative Analysis	182
10.5	Molecular Methods	184
10.5.1	Introduction	184
10.5.2	Definition of Luminescence and Parameters Used in Analysis	184
10.5.3	Instrumental Parameters	190

10.5.4	Measurement and Use of Luminescence Parameters in Analysis.193
10.5.5	Factors Affecting Luminescence Data.199
•11.	OTHER OPTICAL METHODS	
12.	RECOMMENDATIONS FOR NOMENCLATURE OF MASS SPECTROMETRY.201
*13.	DIFFRACTION METHODS	
*	13.1 X-ray Diffraction	
*	13.2 Electron Diffraction	
*	13.3 Neutron Diffraction	
•14.	MAGNETIC METHODS OF ANALYSIS	
*	14.1 Nuclear Magnetic Resonance Spectroscopy	
*	14.2 Electron Paramagnetic Resonance Spectroscopy	
•15.	KINETIC METHODS OF ANALYSIS	
*	15.1 Differential Rate Methods	
*	15.2 Catalytic Methods	
*	15.3 Enzymatic Methods	
16.	RECOMMENDATIONS FOR NOMENCLATURE OF RADIOCHEMICAL METHODS.209
	16.1 Directions for Use.209
	16.2 The Glossary.209
17.	SURFACE ANALYSIS.245
	17.1 Photoelectron Spectroscopy.245
	17.2 In Situ Micro and Surface Analysis.247
	INDEX255
